

INTERNAL · NOT FOR CLIENT DISTRIBUTION

# Royal Compass Travels Month 1 Marketing Playbook

What we are doing, why we are doing it, and how to answer the client's questions honestly and confidently.

TEAM REFERENCE · KEEP THIS OPEN DURING CLIENT CALLS

**Client** Royal Compass Travels · [royalcompasstravels.com](https://royalcompasstravels.com)

**Engagement** Month 1 · Service fee ₹20,000 · Meta ad budget ₹10,000 (paid by client directly to Meta)

**Scope** SEO · GEO · AEO · Meta Ads · Instagram · Website fixes & lead funnel

# How to use this playbook

This is our private working document. It explains every part of the Month 1 scope in plain language, gives us ready answers for client questions, and marks the lines we should not cross.

## THE ONE RULE BEHIND EVERYTHING IN HERE

**We promise the work. We do not promise the results.** We can commit to what we will do, when, and how we will report on it. We cannot commit to rankings, leads, followers or sales, because those depend on Google, Meta, competitors, the offer, and how the client handles enquiries. Every answer in this playbook follows that rule.

## How each section is laid out

- **What it means** — the concept explained simply, so we understand it ourselves first.
- **What we will actually do** — the concrete tasks in our scope.
- **Say this** boxes — wording we can use with the client.
- **Don't say this** boxes — promises and phrases to avoid.
- **Note** boxes — practical tips and things to double-check.

## Contents

|   |                                      |    |                                           |
|---|--------------------------------------|----|-------------------------------------------|
| 0 | Project at a glance                  | 8  | Client FAQ (30 questions)                 |
| 1 | Website SEO                          | 9  | Difficult client questions                |
| 2 | GEO — Generative Engine Optimization | 10 | Month 1 timeline                          |
| 3 | AEO — Answer Engine Optimization     | 11 | Reporting framework                       |
| 4 | Meta Ads & lead generation           | 12 | Things we should NOT accidentally promise |
| 5 | Instagram management                 | A  | Before the client call — checklist        |
| 6 | Website fixes & lead funnel          | B  | Information & access to request           |
| 7 | Client responsibilities              | C  | Quick glossary                            |

## NOTE — WE COULD NOT REVIEW THE LIVE SITE WHILE PREPARING THIS

This playbook is written without a full audit of royalcompasstravels.com. Anything about the current state of the site (which pages exist, which legal pages are missing, what is broken) must be confirmed in the Week 1 audit before we mention it to the client as a fact.

# 0 Project at a glance

If you only remember one page, remember this one.

| Item                   | What we agreed                                                                                                            |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Our service fee        | ₹20,000 for Month 1                                                                                                       |
| Meta ad budget         | ₹10,000 — paid by the client directly to Meta. <b>Not part of our fee.</b> We never hold or handle this money.            |
| Total client outlay    | ₹30,000 for Month 1 (₹20,000 to us + ₹10,000 to Meta)                                                                     |
| Website SEO            | Basic technical and on-page improvements, Search Console setup, early monitoring                                          |
| GEO                    | Make business, service and destination information clear and well-structured for AI-based search tools                    |
| AEO                    | Identify common customer questions; create/improve FAQ and answer content                                                 |
| Meta Ads               | 5 ad creatives, test them, keep running the best 3, monitor and optimise through the month                                |
| Instagram              | 1 post per day (30 posts/month) + 10 reels/month, travel-focused                                                          |
| Website fixes & funnel | Legal pages, relevant UX/lead fixes, Search Console connection, protected admin lead area with client-controlled password |
| Who handles leads      | <b>The client.</b> Calls, WhatsApp, quotations, bookings and follow-up are theirs.                                        |

## What Month 1 is really for

Month 1 is a **foundation and testing month**. By the end of it we want:

1. A cleaner, better-structured website that search engines can read properly, with Search Console collecting data.
2. A working enquiry system where website leads go straight to the client's own admin area.
3. A consistent Instagram presence with a month of useful travel content.
4. Real data from a small Meta Ads test: which creative, message and audience got the most relevant enquiries for the money.
5. An honest month-end report, and a data-based conversation about whether and how to continue.

**NOTE — AGREE THESE TWO THINGS INTERNALLY BEFORE THE FIRST CALL**

- **Reels vs posts:** "1 post every day, 30 posts, 10 reels". Decide and write down whether the 10 reels are *in addition to* the 30 posts (40 pieces) or *part of* the 30. The client will read it one way; make sure we mean the same thing. The presentation lists them separately, so the client will most likely read it as 30 posts + 10 reels.
- **Payment terms and tax:** Decide whether ₹20,000 is inclusive or exclusive of GST (if applicable to us), and when it is payable (e.g. 50% upfront / 50% at mid-month, or 100% upfront). Also note that Meta may add GST on top of ad spend in India, so the client's card may be charged slightly more than ₹10,000 of actual ad delivery — check the billing screen in Ads Manager and tell the client upfront.

# 1 Website SEO

SEO (Search Engine Optimization) means improving a website so that search engines like Google can find it, understand it, and consider it a good result for relevant searches.

## The concepts, in plain language

| Term                   | What it means                                                                                                                                         | Travel example                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| SEO                    | Everything we do so the website shows up (and is clicked) for relevant Google searches without paying for ads.                                        | Someone searches "Dubai tour package from Mumbai" and finds Royal Compass.                                           |
| On-page SEO            | What is <i>on</i> each page: titles, descriptions, headings, text, images, links. Making each page clearly about one topic.                           | The Bali page has a clear title, a proper heading, helpful text about the trip and a clear enquiry button.           |
| Technical SEO          | The "plumbing": can Google access and load the pages? Is the site fast enough, mobile-friendly, secure (HTTPS), free of broken links, with a sitemap? | A package page that Google cannot access because of a setting will never appear in search, however good its content. |
| Keyword                | The words people type into Google. We pick realistic ones that match what the client actually sells.                                                  | "Kerala honeymoon package", "Thailand visa for Indians", "family tour package Europe".                               |
| Page title (title tag) | The blue clickable headline shown in Google results. Around 50–60 characters.                                                                         | <i>Kerala Honeymoon Packages / Royal Compass Travels</i>                                                             |
| Meta description       | The short grey summary under the title in Google. It does not directly improve ranking, but a good one gets more clicks.                              | <i>Customised 5–7 day Kerala honeymoon trips with houseboat stays. Share your dates and get a quote.</i>             |
| Heading structure      | One main heading (H1) per page, then sub-headings (H2, H3) in a logical order — like chapters in a book.                                              | H1: Kerala Honeymoon Packages<br>→ H2: What's included → H2: Best time to visit → H2: FAQs                           |
| Internal linking       | Links from one page of the site to another. Helps visitors and Google find related pages.                                                             | The "Visa help" page links to the relevant destination packages.                                                     |
| Indexing               | Google storing a page in its database. A page that is not indexed cannot appear in results.                                                           | We check that each important page is actually indexed.                                                               |
| Google Search Console  | A free Google tool that shows how the site appears in Google: which searches it shows up for, clicks, indexing problems, and errors.                  | We can see that the site appeared 300 times for "Goa trip package" and got 6 clicks.                                 |

## What we will actually do

### Review & setup

- Basic technical & on-page review of the existing site
- Google Search Console setup and verification
- Sitemap submission (if the site has or can generate one)
- Basic indexing / visibility checks on key pages
- Record a baseline so we can compare later

### Improvements

- Rewrite page titles and meta descriptions
- Fix heading structure (one H1, logical H2/H3s)
- Add relevant travel/service keywords naturally
- Add useful internal links
- Improve thin or unclear content where needed
- Monitor early search data in Search Console

## Why SEO takes time

Google has to re-visit ("crawl") the updated pages, re-evaluate them, and compare them against every other travel website targeting the same searches — including large online travel portals with years of history. That process usually takes **weeks to months**, not days. Month 1 is about fixing the foundation so that improvement is possible; it is not when rankings usually move much.

| What we CAN control                                                                                                                                                                                                                                                                                                                                        | What we CANNOT control                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• Quality and clarity of on-page content</li><li>• Titles, descriptions, headings, internal links</li><li>• Fixing technical issues we find (within scope)</li><li>• Search Console setup and sitemap submission</li><li>• Choosing sensible, realistic keywords</li><li>• Honest monitoring and reporting</li></ul> | <ul style="list-style-type: none"><li>• Google's algorithm and how often it changes</li><li>• How fast Google re-crawls and re-ranks pages</li><li>• What competitors do and how strong their sites are</li><li>• Domain history, age and existing reputation</li><li>• How many people search for a given term</li><li>• Hosting/server issues outside our access</li></ul> |

### SAY THIS — "WHEN WILL I RANK?"

"Honestly, nobody can give you a fixed date — Google decides rankings, and it looks at hundreds of factors including your competitors. What we can do this month is fix the basics so Google can read your site properly, set up Search Console so we can actually see how you're appearing, and start tracking it. Usually you start seeing early movement in impressions over a few weeks to a few months. We'll show you the real numbers every month so you can see the trend yourself."

### DON'T SAY THIS

- "You'll be on page 1 in 30 days." / "We'll get you to #1 on Google."
- "SEO will bring you X visitors or X leads."
- "We guarantee ranking for [keyword]."

## 2 GEO — Generative Engine Optimization

GEO means making a website's information clear, accurate and well-structured so that AI-based tools (like ChatGPT, Gemini, Perplexity or Google's AI Overviews) can understand it correctly if they use it when answering someone's question.

### What it means, simply

More people now ask AI tools things like *"Which travel agencies in [city] do customised Dubai trips?"* These tools build answers from information available on the web. If a business's website is vague, inconsistent or hard to read, the AI has less to work with. GEO is about removing that confusion: **clear facts, clear structure, consistent information.**

### Why it is still an evolving area

- Each AI tool works differently, and the companies behind them do not publish exact rules for which sources they use.
- Their behaviour changes often — sometimes month to month.
- There is no reliable "GEO ranking" report like Search Console for Google. Measurement is limited.
- Much of what helps GEO is the same as good SEO and good content: clarity, accuracy, trust signals.

### What we will actually do

| Task                             | Example for Royal Compass                                                                                                                                                                   |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Clear "about" information        | Who they are, where they are based, how long they've operated (only if the client confirms), what kind of trips they arrange, who they serve.                                               |
| Clear service descriptions       | Separate, plainly worded explanations of each service they actually offer (e.g. holiday packages, flights, visa assistance — only what the client confirms).                                |
| Clear destination information    | Each destination page states what the trip includes, typical duration, best time to go, who it suits.                                                                                       |
| Direct answers / FAQs            | Short, factual answers to common questions (overlaps with AEO — see Section 3).                                                                                                             |
| Consistent business details      | Same name, address, phone and email everywhere on the site (and ideally on Instagram / Google profile).                                                                                     |
| Structured data (where feasible) | Adding standard "schema" code that labels information for machines — e.g. "this is a travel agency", "this is an FAQ". Only where the website platform allows it without major development. |

#### **SAY THIS — EXPLAINING GEO TO THE CLIENT**

"More people are now asking AI tools like ChatGPT or Google's AI answers for travel suggestions. Those tools read information from websites. We're going to make sure your website explains clearly who you are, what you offer and where you take people — in a structured way that's easy for these systems to understand. Nobody can control whether an AI tool mentions a specific business, but a clear, well-organised website gives you a better chance than a vague one."

#### **DON'T SAY THIS**

- "Your website will appear in ChatGPT / Gemini / Perplexity."
- "We'll get AI to recommend you."
- "GEO is the new SEO that gets you results faster."

### 3 AEO — Answer Engine Optimization

AEO means writing content that directly answers the specific questions people ask — so the page is genuinely useful when someone searches a question, and so search engines and voice/AI assistants can easily pick out the answer.

#### What we will actually do

1. **Collect real questions.** Ask the client what customers ask most on calls and WhatsApp. Also look at Google's "People also ask" boxes and search suggestions.
2. **Write short, direct answers.** Answer in the first 1–2 sentences, then add detail.
3. **Structure them clearly.** Use the question as a heading, the answer right below it, and FAQ sections on relevant pages.
4. **Improve informational pages.** Make sure destination and service pages actually answer what a traveller wants to know before enquiring.

#### Example questions for a travel agency

##### PLANNING

- What is the best time to visit Bali?
- How many days are enough for Dubai?
- Is Thailand good for a family trip with kids?

##### BOOKING & SERVICE

- Can you customise a package?
- What is included in the package price?
- Do you help with visas? (only if they do)
- What is your cancellation policy?

#### EXAMPLE — WEAK VS GOOD ANSWER

**Weak:** "Bali is a beautiful destination loved by travellers from all over the world, offering many experiences throughout the year..."

**Good:** "The best time to visit Bali is generally April to October, which is the dry season. July and August are the busiest months, so prices are usually higher. November to March is the wet season, with more rain but fewer crowds."

Facts like seasons and visa rules must be checked and, for anything the client sells, confirmed by the client. Never publish visa or price information we have not verified.

#### SEO vs GEO vs AEO — the difference

|                  | SEO                                            | GEO                                                     | AEO                                      |
|------------------|------------------------------------------------|---------------------------------------------------------|------------------------------------------|
| <b>Main goal</b> | Appear in Google search results and get clicks | Be clearly understood by AI tools that generate answers | Directly answer the questions people ask |

|                       | SEO                                      | GEO                                                         | AEO                                                   |
|-----------------------|------------------------------------------|-------------------------------------------------------------|-------------------------------------------------------|
| <b>Focus</b>          | Pages, keywords, technical health        | Clarity, facts, structure, consistency                      | Questions and short, clear answers                    |
| <b>Travel example</b> | "Kerala tour package" page is well-built | Site clearly states who Royal Compass is and what it offers | "Do I need a visa for Dubai?" answered in 2 sentences |
| <b>Measurable?</b>    | Yes — Search Console                     | Only partly — no reliable tool yet                          | Partly — Search Console queries, FAQ page performance |

In practice, **they overlap a lot**. The same clean, well-structured, helpful page supports all three. It is fine to tell the client that honestly.

**SAY THIS — "DOES AEO GUARANTEE FEATURED SNIPPETS OR AI ANSWERS?"**

"No — and anyone who says it does isn't being straight with you. Google and AI tools choose which answers to show, and they change how they do it regularly. What AEO does is make your pages the kind of clear, direct answer those systems tend to prefer. It improves your chances and it helps real visitors too, but it's not something anyone can guarantee."

**DON'T SAY THIS**

- "We'll get you into the featured snippet / answer box."
- "Your FAQs will show up in Google's AI answers."

## 4 Meta Ads & lead generation

Meta Ads are paid ads that run on Facebook and Instagram. We will use the client's ₹10,000 budget to test which ads and audiences bring the most relevant travel enquiries.

### Creative vs campaign

#### Ad creative

What people actually **see**: the image or video, the headline, the text, and the button (e.g. "Get Quote"). We are making 5 of these.

#### Ad campaign

The **container and settings**: what the goal is (leads, traffic), who sees the ads, how much is spent, and for how long. Creatives live inside a campaign.

### How Meta Ads Manager is organised

**Meta Ads Manager** is the tool (inside the client's Meta Business account) where ads are created, budgets are set, and results are tracked. It has three levels:

#### Campaign

The **goal**. For us: *Leads*. One campaign is enough for Month 1.

#### Ad set

The **audience, budget, schedule and placements**. E.g. "Mumbai, 25–50, interested in international travel".

#### Ad

The **creative** people see. Several ads can sit in one ad set.

### Key terms

| Term        | Plain meaning                                                                      | Example                                        |
|-------------|------------------------------------------------------------------------------------|------------------------------------------------|
| Audience    | The group of people the ad is shown to.                                            | Adults in Delhi NCR interested in travel       |
| Targeting   | The settings that define the audience: location, age, gender, interests, language. | Location: Pune; Age: 28–55; Interest: Holidays |
| Impressions | How many times the ad was shown in total (one person can see it several times).    | 20,000 impressions                             |
| Reach       | How many <i>different people</i> saw the ad at least once.                         | 8,000 people                                   |
| Frequency   | Impressions ÷ reach — average times each person saw it.                            | 2.5                                            |
| CPM         | Cost per 1,000 impressions — how "expensive" the audience is to reach.             | ₹120 per 1,000 views                           |

| Term                       | Plain meaning                                                                                                      | Example              |
|----------------------------|--------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>Clicks</b>              | How many times people clicked the ad (use <i>link clicks</i> , not all clicks).                                    | 180 link clicks      |
| <b>CTR</b>                 | Click-through rate = clicks ÷ impressions × 100.<br>Shows how interesting the ad is.                               | 180 ÷ 20,000 = 0.9%  |
| <b>CPC</b>                 | Cost per click = spend ÷ clicks.                                                                                   | ₹2,400 ÷ 180 = ₹13.3 |
| <b>Lead</b>                | A person who shares their contact details and shows interest — e.g. fills a form with name, phone and destination. | 12 leads             |
| <b>Cost per lead (CPL)</b> | Spend ÷ leads.                                                                                                     | ₹2,400 ÷ 12 = ₹200   |

All numbers above are made up to show the maths. They are not benchmarks and must never be quoted to the client as expected results.

## Traffic vs lead generation

A **traffic** campaign asks Meta to find people likely to *click*. A **lead generation** campaign asks Meta to find people likely to *submit their details*. Clicks are cheap and easy; enquiries are what the client needs. We will run a **leads** objective — either Meta's instant form (the form opens inside Facebook/Instagram) or the website enquiry form. Decide this with the client before launch:

|                  | Meta instant form                                                                                               | Website enquiry form                                                                      |
|------------------|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Pros</b>      | Quick for the user, usually more leads for the money                                                            | Leads land in the client's admin area; visitor sees the website first, often more serious |
| <b>Cons</b>      | Can bring lower-intent leads; leads sit in Meta (client downloads them from Meta Leads Center / Business Suite) | Usually fewer leads; depends on site speed and form quality                               |
| <b>Must have</b> | A privacy policy URL (Meta requires it) and 1–2 qualifying questions (destination, travel month)                | Working form, fast mobile page, tracking set up                                           |

### NOTE

Instant-form leads do **not** automatically go into the website admin area. Connecting them is not in our Month 1 scope. The client (or we, if agreed) downloads them from Meta. Make sure the client knows where to find these leads and checks them daily.

## ₹10,000 is a testing budget

₹10,000 is a small budget for paid ads. That is fine — but it means the goal of Month 1 is to **learn**, not to scale. With this budget, each ad gets a limited amount of spend, so results are directional ("this looks better") rather than statistically certain. Meta's system also needs time and data to "learn" who responds best, and small budgets give it less data.

## Suggested way to use the budget (guideline, adjust to real data)

| Phase             | Approx. days              | Approx. spend | What happens                                                                          |
|-------------------|---------------------------|---------------|---------------------------------------------------------------------------------------|
| 1. Test           | First 5–7 days of running | ~₹4,000       | All 5 creatives run with an equal chance. We watch CTR, CPC, leads and lead quality.  |
| 2. Select         | 1 day                     | —             | Pause the 2 weakest ads, based on the criteria below.                                 |
| 3. Run & optimise | Remaining ~10–12 days     | ~₹6,000       | Best 3 ads keep running. Small adjustments to audience/budget. No constant tinkering. |

## How to choose the "best 3" ads

Decide in this order. Do not pick an ad just because it got the most likes.

1. **Relevant leads** — did it bring enquiries that the client says are genuine (real travel interest, reachable phone)?
2. **Cost per lead** — among ads with leads, which cost less per lead?
3. **CTR and CPC** — if no ad has enough leads yet, which gets the most interest per rupee?
4. **Enough spend to judge** — don't kill an ad after ₹100. Give each a fair share before deciding.

Write down why each ad was paused or kept. The client will ask.

## What we should check (and how often)

| Check                     | Frequency           | Why                                                 |
|---------------------------|---------------------|-----------------------------------------------------|
| Ads delivering / approved | Daily               | Rejected or stuck ads waste days                    |
| Spend vs plan             | Daily               | Stay within ₹10,000                                 |
| Leads received & quality  | Daily (with client) | The only metric that really matters                 |
| CTR, CPC, CPM, frequency  | Every 2–3 days      | Early signals of which creative/audience is working |
| Cost per lead             | Weekly              | Compare ads fairly once there is enough data        |

## If ads perform poorly

- Check the basics first: is the ad approved, is the form working, is the audience too small or too broad?
- Look at where the drop happens: **low CTR** = creative/message not interesting; **good CTR but no leads** = form, landing page or offer problem; **leads but poor quality** = targeting or form too easy.
- Change one thing at a time (creative, audience, or form) so we know what made the difference.
- Tell the client early and plainly. Poor early results are useful data — hiding them is what damages trust.

## Before launching ads, ask the client for

### ACCESS & SETUP

- Admin/partner access to their Meta Business account (Business Manager)
- Facebook Page and Instagram account linked to it
- Payment method added by the client in Ads Manager
- Privacy policy URL (we are adding this to the site)
- Who receives and follows up on leads, and how fast

### BUSINESS DECISIONS

- Which destinations/packages to promote (1–3 max for the test)
- Target locations — where do their customers actually come from?
- Any real offer or price ("from ₹X") they are happy to advertise
- What makes a "good" lead for them
- Anything they don't want said or shown

### CREATIVE ASSETS WE MAY NEED

Real trip photos/videos (theirs or customers' with permission), logo and brand colours, package itineraries, inclusions/exclusions, starting prices, validity dates of offers, testimonials they have permission to use, and any licences or affiliations they can show. If they have no photos, we use properly licensed stock images — never images scraped from Google.

## Likely questions about ads

### "How many leads will ₹10,000 generate?"

#### SAY

"I can't give you a fixed number, and I'd be suspicious of anyone who does. It depends on the destination, the offer, the audience and competition. What this ₹10,000 will tell us is roughly what a lead costs for your business and which ads work best — that's what we need before spending more."

### "Can you guarantee leads?"

#### SAY

"No, we can't guarantee leads — Meta decides who sees the ads, and people decide whether to enquire. What we guarantee is the work: 5 well-made ads, a proper test, active monitoring, and a clear report of what happened and why."

### "Why didn't we get leads?"

#### SAY

"Let me show you where it stopped. If people saw the ad but didn't click, the ad or offer wasn't strong enough for that audience. If they clicked but didn't fill the form, the form or page needs work. Here's what we're changing next based on that."

### "Why is the CPC high?"

**SAY**

"CPC goes up when the audience is competitive — travel is — or when the ad isn't getting many clicks for how often it's shown. We're watching it, testing which creative gets cheaper clicks, and we'll shift budget toward those. Also, a low CPC isn't the goal on its own — the cost per genuine enquiry is."

### "Why are people clicking but not enquiring?"

**SAY**

"That usually means the ad is interesting but something after the click is stopping them — the form might be too long, the page slow on mobile, the price or offer unclear, or they're just browsing. We'll check each of these and fix what's in our control."

### "Should we increase the budget?"

**SAY**

"Not yet. Let's first finish this test and see the cost per enquiry and the lead quality. If an ad is clearly bringing good enquiries at a cost that makes sense for your margins, then increasing gradually makes sense. Putting more money into something unproven usually just costs more."

### "Which country should we target?"

**SAY**

"Where are most of your current customers from, and where can you actually serve and collect payment? We'd start there. For a small test budget, it's better to focus on one or two locations than spread thin."

### "Can we target the US and UK?"

**SAY**

"Technically yes. But ads in the US and UK usually cost much more per view and per click than in India, so ₹10,000 would go much less far. If you have a specific offer for NRIs or travellers there and you can serve them, we can discuss a small separate test — but for Month 1 I'd suggest starting where your customers already are."

### "Why did one ad perform better than another?"

**SAY**

"Usually it's the first second — the image or hook — and how clearly the offer is stated. Some destinations also simply attract more interest. We'll show you the ads side by side with their numbers, and use what worked to guide the next creatives."

### **DON'T SAY THIS**

- "₹10,000 will get you around 50 leads." (or any number)
- "Leads will be cheaper than on Google."
- "We'll target only rich people / only people ready to book."
- "All 5 ads will run the whole month."

## 5 Instagram management

Monthly output: 1 post every day (30 posts) and 10 reels, all travel-focused. The purpose is to build a consistent, trustworthy profile — so that when someone sees an ad or hears about Royal Compass, the Instagram page gives them confidence to enquire.

### Metrics, explained

| Metric              | What it means                                                                                         | How much it matters                           |
|---------------------|-------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| Reach               | Number of different accounts that saw the content                                                     | Useful — shows how far content travels        |
| Impressions / views | Total number of times content was shown (repeat views counted)                                        | Background number                             |
| Engagement          | Likes, comments, shares, saves. <b>Saves and shares</b> are the strongest signals for travel content. | Useful, especially saves/shares               |
| Followers           | People who chose to follow the account                                                                | Slow-moving; not a sales metric               |
| Profile visits      | People who tapped through to the profile                                                              | <b>Important</b> — shows real interest        |
| Link / contact taps | Taps on website link, call, WhatsApp or DM button                                                     | <b>Most important</b> — closest to an enquiry |
| DMs about trips     | Direct messages asking about travel                                                                   | <b>Most important</b> (client tracks these)   |

### Suggested content mix for the month

| Content type                         | Posts | Examples                                                                       |
|--------------------------------------|-------|--------------------------------------------------------------------------------|
| Destination inspiration              | ~8    | "5 things to do in Bali on a first trip", carousel of a destination            |
| Travel tips & information            | ~6    | Packing list for Kashmir in winter; documents needed for an international trip |
| Royal Compass services               | ~5    | How a custom trip is planned with them; what they help with                    |
| Packages / offers (only if provided) | ~4    | A real package with correct price, dates and inclusions                        |
| FAQs                                 | ~4    | "Can I customise a package?" — matches website FAQs (AEO)                      |

| Content type   | Posts | Examples                                                                |
|----------------|-------|-------------------------------------------------------------------------|
| Trust-building | ~3    | Real customer photos/reviews (with permission), behind-the-scenes, team |

A starting mix, not a rule. Adjust once we see what gets saved, shared and enquired about.

### What makes a useful travel post

- Gives the viewer something useful (a tip, an idea, a fact)
- Real, attractive visuals — not blurry or over-edited
- One clear idea per post
- Short caption with a simple next step ("DM us 'BALI' for a plan")
- Accurate information — no invented prices or visa claims

### What makes a good travel reel

- Strong first 1–2 seconds (the view or the hook text)
- Short: roughly 7–30 seconds
- Text on screen (many watch without sound)
- Vertical 9:16, good lighting, steady footage
- Trending audio only where appropriate and allowed for business accounts

## How Instagram supports the Meta Ads

- People who see an ad often check the profile before enquiring. An active, useful profile builds trust.
- Organic posts show which themes people like — we can turn the best ones into ads.
- Reels can be reused as ad creatives (with client approval).

### SAY THIS

"Posting daily keeps your profile active and trustworthy, so people who find you — through ads, search or word of mouth — see a real, active business. Growth on Instagram is gradual; we'll track which content gets saved, shared and leads to profile visits and messages, and do more of that."

### DON'T SAY THIS

- "Daily posting will get you X followers." / "Your reels will go viral."
- "Instagram will bring you bookings every week."
- "We'll grow you to 10K followers." (Never buy followers — it harms the account.)

## 6 Website fixes & lead funnel

We will fix what is getting in the way of enquiries, add essential legal pages, connect Search Console, and build a protected admin area where website enquiries land — owned and controlled by the client.

### Legal pages — why they matter

- **Trust:** travellers are paying significant amounts; clear policies reassure them.
- **Platform requirements:** Meta lead forms require a privacy policy link. Payment gateways usually require terms and refund policies.
- **Data handling:** the site collects names, phone numbers and emails, so it should explain how that data is used. India's data protection law (DPDP Act, 2023) makes this more important.

Typical pages: **Privacy Policy**, **Terms & Conditions**, **Cancellation & Refund Policy**, and optionally a **Disclaimer**.

#### NOTE — WE ARE NOT LAWYERS

We will draft these from standard structures using the client's actual policies (cancellation rules, refund timelines, etc.). The **client must review and approve them**, and we should recommend they have a legal professional check them. Never invent refund or cancellation terms.

### Search Console: verification and indexing

- **Verification** proves to Google that the client owns the site. Usually done by adding a small code (DNS record at the domain provider, or an HTML tag/file on the site). The Search Console property should be owned by the **client's Google account**, with us added as a user.
- **Sitemap** — a list of the site's pages we submit so Google can find them.
- **Indexing** — whether Google has stored a page. Search Console shows which pages are indexed and why some are not.
- **Why data takes time:** after setup, Search Console typically starts showing data after a few days, and it becomes useful for spotting trends after a few weeks. In Month 1 we mostly get a baseline.

### How a website enquiry should flow

**Teal** = we build it. **Gold** = client's responsibility.

The visitor should also see a clear confirmation ("Thanks — we'll contact you within X hours") where X is a timeframe **the client** commits to.

## The admin lead area

An **admin funnel** here simply means: every enquiry from the website is stored in a private, password-protected page that only the client can open — instead of being lost in an inbox or sent to us.

| Recommended fields visible to the client                    | Why                                                   |
|-------------------------------------------------------------|-------------------------------------------------------|
| Date & time received                                        | To follow up fast; speed matters a lot in travel      |
| Name, phone, email                                          | To contact the lead                                   |
| Destination / package interested in                         | To prepare a relevant reply                           |
| Travel dates / month, no. of travellers                     | To quote accurately                                   |
| Message                                                     | Any extra details                                     |
| Source (page / campaign)                                    | To see which marketing channel brought the lead       |
| Status (New / Contacted / Quoted / Booked / Not interested) | Simple tracking; lets the client tell us lead quality |

## Why client-controlled credentials matter

- The leads are the client's customers' personal data. They should own and control access.
- It protects us: if data is ever misused, it is clear we did not have access.
- It avoids dependency: the client is never locked out because of us.
- In practice: we set up the area; the client sets the password on first login (or via a reset link). We never ask for, store, or share it.

### NOTE — BASIC SECURITY WE SHOULD INCLUDE

HTTPS on the site, spam protection on the form (e.g. a hidden honeypot field or CAPTCHA), a strong-password requirement, and an email notification to the client for each new enquiry. Confirm where the data is stored and that it is backed up with the hosting.

## Who is responsible for what

| Task                   | Us                                       | Client                                  |
|------------------------|------------------------------------------|-----------------------------------------|
| Legal page drafts      | <b>Draft &amp; publish</b>               | Provide policies, review, approve       |
| Relevant website fixes | <b>Identify &amp; fix (within scope)</b> | Provide access, approve changes         |
| Search Console         | <b>Set up &amp; monitor</b>              | Own the property / approve verification |

| Task                           | Us                      | Client                               |
|--------------------------------|-------------------------|--------------------------------------|
| Enquiry form & admin area      | <b>Build &amp; test</b> | Set and keep the password            |
| Responding to enquiries        | <b>No</b>               | <b>Yes — calls, WhatsApp, emails</b> |
| Quotations, bookings, payments | <b>No</b>               | <b>Yes</b>                           |
| Telling us about lead quality  | Ask for it weekly       | <b>Yes — needed to optimise ads</b>  |

#### DON'T SAY THIS

- "Every enquiry will turn into a booking." / "This system will increase your sales."
- "We'll manage the leads for you." (Not in scope.)
- "We'll rebuild the website." (Fixes only — not a redesign.)

## 7 Client responsibilities

Marketing is a two-sided job. Our work depends on information, access and approvals from Royal Compass. Being clear about this at the start avoids blame later.

| What we need                 | Details                                                                                                                 | Why                            |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| Business information         | Legal name, address, phone, WhatsApp, email, years in business, registrations/affiliations (only real ones)             | Website, GEO, legal pages, ads |
| Services & packages          | What they actually sell and which are priorities this month                                                             | All content and ads            |
| Destination information      | Destinations they cover, itineraries, inclusions/exclusions                                                             | SEO, AEO, Instagram            |
| Pricing / offers             | Starting prices, validity dates, conditions — only what they are happy to publish                                       | Ads and posts                  |
| Photos, videos, brand assets | Logo, brand colours, real trip photos/videos, permitted testimonials                                                    | Creatives, reels, website      |
| Access                       | Website/hosting/CMS, Instagram, Meta Business Manager, Google (Search Console / Business Profile), domain DNS if needed | We can't work without it       |
| Timely approvals             | Content calendar, creatives, legal pages — ideally within 24–48 hours                                                   | Keeps the schedule on track    |
| Timely response to leads     | Reply to every enquiry quickly, ideally the same day                                                                    | Slow replies waste leads       |
| Sales handling               | Calls, WhatsApp chats, quotations, bookings, payments                                                                   | Conversion is their process    |
| Lead feedback                | Tell us weekly which leads were genuine / junk                                                                          | So we can improve targeting    |

### Why client delays delay results

Everything in Month 1 is chained together. For example: no Meta access → ads can't be set up → no test data by month-end. No approval of creatives → ads launch late → less time to learn. No destination details → we can't write accurate pages or posts. If access or approvals arrive late, the month's timeline shifts with them.

**SAY THIS — SETTING EXPECTATIONS KINDLY**

"To make the most of this month, we'll need a few things from your side early — access to accounts, some photos and package details, and quick approvals. Anything that comes in late will push that part of the plan back, so we'll send you one simple list on day one and keep reminding you gently."

**NOTE — PROTECT THE TIMELINE IN WRITING**

Send a short written summary after the kickoff call listing what we need, from whom, and by when. If something is late, mention it in the weekly update factually ("Meta access received on the 9th instead of the 3rd, so ads launch date moved to..."). No blame, just facts.

## 8 Client FAQ — 30 likely questions

For each question: what they're really asking, a simple explanation for us, what we can say, and what not to promise. Use your own words — these are guides, not scripts to read out.

| 1. “What exactly will you do for SEO this month?” |                                                                                                                                                                                                                                                                                          | SEO |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                     | Is this real work or just a buzzword on the invoice?                                                                                                                                                                                                                                     |     |
| FOR US                                            | List the concrete tasks: review, titles/descriptions, headings, keywords, internal links, content fixes, Search Console, monitoring.                                                                                                                                                     |     |
| SAY                                               | “We'll review your site, fix page titles and descriptions, tidy up headings, add the right travel keywords naturally, link related pages together, improve weak content, and set up Google Search Console so we can see how you appear on Google. You'll get a list of what we changed.” |     |
| DON'T PROMISE                                     | Rankings, traffic numbers, or a page-1 date.                                                                                                                                                                                                                                             |     |

| 2. “When will my website rank on Google?” |                                                                                                                                                                                                                                                | SEO |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                             | When will I see a return on this?                                                                                                                                                                                                              |     |
| FOR US                                    | Nobody controls Google's timing. Month 1 fixes the foundation; movement in impressions usually shows over weeks to months.                                                                                                                     |     |
| SAY                                       | “I can't give you an honest date — Google decides that, and it depends on competition too. What I can tell you is that we'll fix the basics this month and show you your real Search Console numbers so you can see the trend as it develops.” |     |
| DON'T PROMISE                             | “Page 1 in 30/60/90 days.”                                                                                                                                                                                                                     |     |

| 3. “Which keywords will you target?” |                                                                                                                                                                                                                                        | SEO |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                        | Will you target things that actually bring my customers?                                                                                                                                                                               |     |
| FOR US                               | Pick realistic keywords tied to what they sell and where. Long, specific phrases (e.g. 'Kerala honeymoon package from Delhi') are easier than broad ones ('travel agency').                                                            |     |
| SAY                                  | “We'll focus on specific phrases linked to your actual packages and destinations — the kind of thing a real customer types before they enquire. Broad terms like 'travel agency' are dominated by big portals, so we'll be practical.” |     |
| DON'T PROMISE                        | Ranking for broad terms like “travel agency India”.                                                                                                                                                                                    |     |

| 4. “Why can't we just rank for 'best travel agency'?” |                                                                                                                                                                                                                              | SEO |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                         | Why not aim for the big one?                                                                                                                                                                                                 |     |
| FOR US                                                | Broad, high-competition terms are dominated by large brands; also 'best' searches are often answered by listicles and review sites.                                                                                          |     |
| SAY                                                   | “Those broad terms are dominated by very large travel companies with years of history. We'll get far better value going after specific searches where you actually have a chance and where the person is closer to booking.” |     |
| DON'T PROMISE                                         | That we can compete with MakeMyTrip-scale sites in Month 1.                                                                                                                                                                  |     |

| 5. “What is Google Search Console and why do we need it?” |                                                                                                                                                                                                                                      | SEO |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                             | Is this another tool I'll have to pay for?                                                                                                                                                                                           |     |
| FOR US                                                    | Free Google tool. Shows searches, clicks, indexing issues. Client owns it; we're added as users.                                                                                                                                     |     |
| SAY                                                       | “It's a free tool from Google that shows how your website appears in Google — what people searched, how often you showed up, and any problems Google found. It will be under your own Google account; we'll just have access to it.” |     |
| DON'T PROMISE                                             | That it will improve rankings by itself — it only measures.                                                                                                                                                                          |     |

| 6. “What is GEO? Will my business show up in ChatGPT?” |                                                                                                                                                                                                                                                                                        | GEO |
|--------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                          | Can you get AI to recommend me?                                                                                                                                                                                                                                                        |     |
| FOR US                                                 | GEO = clear, structured, consistent information for AI tools. No one controls what AI tools say.                                                                                                                                                                                       |     |
| SAY                                                    | “GEO means making your website's information clear and well-organised so AI tools like ChatGPT or Google's AI answers can understand your business correctly. We can't control whether they mention you — nobody can — but we can make sure they have clear information to work with.” |     |
| DON'T PROMISE                                          | “You'll appear in ChatGPT/Gemini/Perplexity.”                                                                                                                                                                                                                                          |     |

| 7. “How will you measure GEO?” |                                                                                                                                                                                                                                   | GEO |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                  | How will I know it's working?                                                                                                                                                                                                     |     |
| FOR US                         | Honestly: there's no reliable tracking tool yet. We can do manual spot-checks and track related SEO signals.                                                                                                                      |     |
| SAY                            | “Honestly, this is still a new area and there's no reliable report for it yet. We'll track the related Google data in Search Console and do occasional manual checks, and we'll be upfront about what can and can't be measured.” |     |
| DON'T PROMISE                  | An 'AI visibility score' or made-up tracking.                                                                                                                                                                                     |     |

| 8. “What is AEO and how is it different from SEO?” |                                                                                                                                                                                                                                           | AEO |
|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                      | Am I paying twice for the same thing?                                                                                                                                                                                                     |     |
| FOR US                                             | AEO = question-and-answer content. It overlaps with SEO — same pages, different angle. We don't charge separately; it's all within the ₹20,000.                                                                                           |     |
| SAY                                                | “SEO makes your pages findable on Google. AEO focuses on answering the specific questions your customers ask — like 'best time to visit Bali' or 'can I customise my package'. They overlap, and it's all part of the same monthly work.” |     |
| DON'T PROMISE                                      | That AEO is a separate product with its own guaranteed results.                                                                                                                                                                           |     |

| 9. “Will my FAQs show up in Google's answer box?” |                                                                                                                                                                                                         | AEO |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| REALLY ASKING                                     | Is there a guaranteed visible outcome?                                                                                                                                                                  |     |
| FOR US                                            | Google picks featured snippets/AI answers. Clear answers improve chances only.                                                                                                                          |     |
| SAY                                               | “They might, but Google decides what goes in those boxes and it changes often. Clear, direct answers improve the chance, and they also help real visitors decide to enquire — which is the main point.” |     |
| DON'T PROMISE                                     | Featured snippets or AI answer placement.                                                                                                                                                               |     |

| 10. “How many leads will I get from ₹10,000?” |                                                                                                                                                                                                                                                        | META ADS |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| REALLY ASKING                                 | Is this money going to pay off?                                                                                                                                                                                                                        |          |
| FOR US                                        | Unknowable in advance. Month 1 is a test to find the real cost per lead.                                                                                                                                                                               |          |
| SAY                                           | “I can't honestly give you a number before we run it. The point of this ₹10,000 is to find out what a lead actually costs for your business, which ad works best, and whether the leads are genuine. That tells us whether spending more makes sense.” |          |
| DON'T PROMISE                                 | Any lead number or cost-per-lead estimate.                                                                                                                                                                                                             |          |

| 11. “Is the ₹10,000 part of your ₹20,000?” |                                                                                                                                                                                                                                                                          | META ADS |

| REALLY ASKING                   | How involved do I need to be?                                                                                                                                                                                              |             |
| FOR US                          | Access, info, assets, approvals, lead follow-up.                                                                                                                                                                           |             |
| SAY                             | “Mainly: access to your website and Meta/Instagram accounts, details of your packages and prices, any photos or videos, quick approvals, and fast replies to the enquiries that come in. We'll send one simple checklist.” |             |
| DON'T PROMISE                   | That the client doesn't need to do anything.                                                                                                                                                                               |             |

| 30. “What happens after Month 1?” |                                                                                                                                                                                                                         | FUTURE |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| REALLY ASKING                     | Am I locked in?                                                                                                                                                                                                         |        |
| FOR US                            | No lock-in. Month-end review → continue/adjust/stop based on data.                                                                                                                                                      |        |
| SAY                               | “At the end of the month we'll go through the results together. If the data shows something working, we'll recommend what to continue or scale. If not, we'll be honest about that. There's no obligation to continue.” |        |
| DON'T PROMISE                     | Month 2 results in advance, or discounts we haven't agreed.                                                                                                                                                             |        |

## 9 Difficult client questions

These are the questions that can feel uncomfortable. The goal is to be honest, calm and clear about scope — without sounding defensive. Acknowledge the concern first, then explain.

### A SIMPLE PATTERN THAT WORKS

1. **Acknowledge** ("That's a fair question.") → 2. **Explain honestly** (what's true, in plain words) → 3. **Show what we do control** → 4. **Offer the next step** (data, a review, an adjustment).

#### 1. "Why should I pay ₹20,000?"

##### SAY

"That's a fair question. The ₹20,000 covers six areas of work this month — website SEO, AI and answer-focused content, 30 posts and 10 reels, 5 ad creatives with a month of ad management, website fixes with legal pages, and your own private lead system — plus reporting. You'll get a clear list of everything completed, so you can judge the value yourself."

##### NOTE FOR US

Walk through deliverables, not promises. Don't apologise for the price.

#### 2. "Others are doing this for ₹15,000."

##### SAY

"That may well be true, and prices vary. I'd suggest comparing exactly what's included — number of posts and reels, whether ads, website fixes, legal pages and a lead system are part of it, and how reporting works. Our price is for this specific scope. If the scope needs to change to fit a budget, we can talk about that openly."

##### NOTE FOR US

Never criticise competitors. If reducing price, reduce scope too.

#### 3. "Can you guarantee leads?"

##### SAY

"No, and I'd be careful of anyone who does. Meta decides who sees ads and customers decide whether to enquire. What we guarantee is the work — properly made ads, a structured test, active monitoring and honest reporting on what the ₹10,000 produced."

##### NOTE FOR US

Stay calm and consistent. This answer should never change.

#### 4. "Can you guarantee Google ranking?"

##### SAY

"No one can guarantee Google rankings — Google controls that, and even Google itself says so. We can guarantee we'll fix the site's foundations properly and show you the real Search Console data as it develops."

##### NOTE FOR US

Google's own guidance warns against anyone guaranteeing rankings — a useful, neutral point.

## 5. “When will I get results?”

### SAY

“It depends on the channel. Ads give data fastest — within days of launching. Instagram builds gradually. SEO usually takes the longest, often months. This month is about getting the foundation right and learning from the ad test, so by month-end we'll have real data to decide on next steps.”

### NOTE FOR US

Separate channels; don't give one blanket date.

## 6. “Why didn't I get any leads?”

### SAY

“I understand that's frustrating. Let's look at where it stopped — views, clicks, or the form. Here's what the numbers show, and here's what we're changing. A test that doesn't produce leads still tells us something important, so the next spend is better directed.”

### NOTE FOR US

Come with the data and a specific next action. Never blame the client in the moment — check lead response and offer calmly afterwards.

## 7. “Why should I spend ₹10,000 on ads?”

### SAY

“SEO and Instagram take time to build. Ads are the fastest way to find out whether people respond to your packages and what an enquiry actually costs. ₹10,000 is a controlled amount to learn that before any bigger decision — and it goes directly to Meta from your account.”

### NOTE FOR US

If they don't want to spend it, don't pressure. Note the ads part of scope can't be delivered without budget.

## 8. “Can you get me 100 leads?”

### SAY

“I can't promise a number, because it depends on the offer, audience and competition. After this test we'll know your real cost per lead. Then we can calculate honestly what budget would be needed to aim for more — and whether that makes business sense for you.”

### NOTE FOR US

Don't do the maths live with guessed numbers.

## 9. “Why are there clicks but no enquiries?”

### SAY

“That's actually useful information — it means the ad is interesting but something after the click is stopping people. Usually it's the form, page speed on mobile, an unclear price or offer, or people just browsing. We'll check each and fix what's in our control.”

### NOTE FOR US

Check: form works? Mobile speed? Offer clear? Right audience?

#### 10. “What if I don't get results in the first month?”

##### SAY

“Then we'll tell you clearly, show you why, and recommend what to change — or whether to stop. Month 1 is meant to build the foundation and test, so even a weak result gives us data. You're not locked in beyond this month.”

##### NOTE FOR US

Honesty here builds long-term trust.

#### 11. “Why do you need access to my accounts?”

##### SAY

“We need it to do the work — edit the website, set up Search Console, publish on Instagram, and run ads. Wherever possible we'll use partner access instead of your passwords, so you stay the owner and can remove us anytime. Your lead admin password stays only with you.”

##### NOTE FOR US

Use Meta Business partner access and Google user access, not shared passwords.

#### 12. “Why isn't SEO giving immediate traffic?”

##### SAY

“Google needs time to re-read your updated pages and compare them with competitors. It's more like building a reputation than switching on a tap. The work we do now is what makes future improvement possible — and we'll show you Search Console so you can see the trend yourself.”

##### NOTE FOR US

Point to impressions trend, not clicks, early on.

#### 13. “Why do we need reels?”

##### SAY

“Instagram currently shows short videos to more people who don't follow you yet, and travel is a very visual thing to sell. Reels also give us material we can reuse as ads. They're one part of the mix, not a guarantee of reach.”

##### NOTE FOR US

Avoid claiming reels 'always' get more reach.

#### 14. “Why aren't all 5 ads running?”

##### SAY

“We tested all 5, and 2 clearly performed weaker for your audience. With a ₹10,000 budget, it's smarter to put the money behind the ones that are working. Here's the comparison — and the weaker ones still taught us what doesn't work.”

##### NOTE FOR US

Keep a short written note of why each ad was paused.

### 15. “Why did you stop one ad?”

#### SAY

“It was costing more per click and bringing fewer enquiries than the others after a fair test period. Keeping it running would have taken budget from better ads. Here are the numbers side by side.”

#### NOTE FOR US

Show data. Don't stop ads too early without enough spend to judge.

### 16. “What happens after the first month?”

#### SAY

“We'll review everything together: what worked, what didn't, what it cost. Then we'll recommend whether to continue, adjust or pause — and if you continue, what the next month would focus on. No obligation either way.”

#### NOTE FOR US

Don't pre-sell Month 2. Let the data do it.

# 10 Month 1 timeline

A realistic four-week plan. Week 1 depends heavily on how quickly we receive access and information. If access is delayed, everything moves back — and we say so.

## WEEK 1

### Audit & setup

- Kickoff call; share the requirements list
- Collect access & assets
- Website audit (SEO, UX, forms, legal pages)
- Search Console setup & verification
- Record SEO baseline
- Collect customer questions (AEO)
- Instagram content calendar for approval
- Meta Ads plan: destinations, audience, form type
- Start daily posting once calendar is approved

## WEEK 2

### Build & fix

- Titles, descriptions, headings, internal links
- Content & FAQ improvements (SEO/GEO/AEO)
- Legal pages drafted → client review
- Website fixes affecting leads/UX
- Enquiry form + protected admin area; client sets password
- Test the full enquiry flow end-to-end
- Design 5 ad creatives → client approval
- Instagram posts & first reels continue

## WEEK 3

### Launch & learn

- Launch Meta Ads test (all 5 creatives)
- Daily checks: delivery, spend, leads
- Check lead quality with client
- After ~5–7 days: pause 2 weakest, keep best 3
- Instagram posts & reels continue
- Short written mid-month update

## WEEK 4

### Optimise & review

- Run & optimise best 3 ads
- Remaining posts & reels
- Review Search Console early data
- Collect all metrics
- Prepare month-end report
- Review call: what worked, what didn't, recommendation on continuing

## NOTE — REALISTIC CAVEATS

- Meta ads can take up to a day or more for review/approval; new ad accounts sometimes face extra checks or spending limits.
- If ads launch in Week 3, some of the ₹10,000 may still be unspent at the 30-day mark. That's okay — agree with the client that the test runs until the budget is used, even if it goes a few days past the month.
- Search Console data in Month 1 is a baseline, not a result.

# 11 Reporting framework

One simple month-end report (plus a short mid-month update). Show real numbers, explain them in one line each, and end with what we learned and recommend. No padding.

| Area      | Metric                         | What it tells us                              | Weight                        |
|-----------|--------------------------------|-----------------------------------------------|-------------------------------|
| Website   | Search impressions             | How often the site appeared in Google results | Useful trend                  |
|           | Clicks                         | How many people came from Google search       | Important                     |
|           | Search queries                 | Which words people used to find the site      | Important — guides content    |
|           | Top-performing pages           | Which pages attract search visitors           | Useful                        |
| Instagram | Reach                          | How many accounts saw the content             | Useful                        |
|           | Engagement (esp. saves/shares) | Whether content is valued                     | Useful                        |
|           | Profile visits                 | Interest in the business                      | Important                     |
|           | Content performance            | Which topics/formats worked best              | Important — guides next month |
| Meta Ads  | Spend                          | Money used from the ₹10,000                   | Must report                   |
|           | Impressions                    | Total times ads were shown                    | Context only                  |
|           | Reach                          | Different people who saw the ads              | Context only                  |
|           | CTR                            | How engaging each ad was                      | Diagnostic                    |
|           | CPC                            | Cost of each click                            | Diagnostic                    |
|           | Leads                          | Enquiries received                            | Most important                |
|           | Cost per lead                  | Spend ÷ leads                                 | Most important                |

### Metrics that matter

- Leads and cost per lead
- Lead quality (from client feedback)
- Search clicks and queries
- Profile visits, link taps, DMs

### Vanity metrics (context only)

- Impressions and reach on their own
- Likes
- Follower count
- Cheap clicks that don't lead to enquiries

Not useless — but never present them as "results".

### Month-end report outline

1. **Summary** — 4–5 lines: what was done, key numbers, main learning.
2. **Work completed** — checklist against the agreed scope.
3. **Website** — Search Console numbers, what changed, what's pending.
4. **Instagram** — output delivered, top 3 posts/reels, reach, profile visits.
5. **Meta Ads** — spend, leads, CPL, which ads were kept/paused and why.
6. **Leads** — total enquiries (website + Meta), quality as reported by client.
7. **What we learned** — honest, including what didn't work.
8. **Recommendation** — continue / adjust / pause, with reasons.

#### NOTE — ATTRIBUTION HONESTY

Don't claim credit for bookings we can't trace. If a customer called after seeing Instagram, only the client knows that. Report what the data shows, and ask the client what they observed.

# 12 Things we should NOT accidentally promise

Most trouble with clients doesn't come from bad work — it comes from casual promises made on a call. Read this list before every client meeting.

| Do not promise                     | Why                                                        | What we can say instead                                                         |
|------------------------------------|------------------------------------------------------------|---------------------------------------------------------------------------------|
| Guaranteed rankings                | Google decides; competitors and algorithms change          | "We'll improve the site's foundation and track visibility monthly."             |
| Guaranteed leads                   | Depends on offer, audience, budget, competition            | "We'll run a proper test and report exactly what it produced."                  |
| Guaranteed sales                   | Sales depend on the client's follow-up, prices and service | "We help bring enquiries; converting them is your team's process."              |
| Guaranteed AI visibility           | AI tools choose sources unpredictably                      | "We make your information clear so AI tools can understand it."                 |
| Guaranteed followers               | Organic growth is gradual and uncontrollable               | "We'll keep the profile active and track what content works."                   |
| Unlimited revisions                | Time is limited within the fee                             | "Each item includes up to 2 rounds of revisions." (agree the number internally) |
| Unlimited ad management            | Scope is 5 creatives, 1 test, ₹10,000 budget               | "Extra campaigns or budget can be scoped separately."                           |
| Unlimited website development      | Scope is fixes, legal pages and lead area — not a redesign | "Happy to quote new pages or features separately."                              |
| Unlimited content                  | Scope is 30 posts + 10 reels                               | "Additional content can be added in next month's plan."                         |
| Handling their sales / conversions | Calls, WhatsApp, quotes and bookings are the client's      | "We'll make sure every enquiry reaches you quickly and clearly."                |

## Handling scope creep politely

**Scope creep** is when extra work slowly gets added without anyone agreeing to it ("Can you just also..."). It is normal and usually not bad intent. Handle it early and kindly.

1. **Don't say yes on the spot.** "Good idea — let me check how that fits into this month's plan and get back to you today."
2. **Check it against the scope** (Section 0). Is it clearly included?

3. **If it's small and reasonable**, you may do it once as goodwill — but say so: "We'll include this one, it's a small one."
4. **If it's not small**, offer options: swap it for something in scope, add it to next month, or quote it separately.
5. **Confirm in writing** — a short WhatsApp/email message is enough.

#### SAY THIS — EXAMPLES

"A Google Ads campaign is a great idea for later, but it isn't part of this month's plan. We could look at it once we have the Meta results — want me to note it for the month-end review?"

"Building a full new booking page is more than a fix — I'd rather do it properly. I'll send you a separate short quote so you can decide."

"We can definitely replace one of this week's posts with the Diwali offer, so it stays within the 30 posts."

## A Before the client call — checklist

- ☐ Read Section 0 (at a glance) and Section 12 (don't promise) again.
- ☐ Look through royalcompasstravels.com on mobile and desktop; note 3–5 real observations (confirmed, not assumed).
- ☐ Check their Instagram: last post date, followers, what they post, whether they use reels.
- ☐ Agree internally: are the 10 reels in addition to the 30 posts? How many revision rounds per item?
- ☐ Agree payment terms and whether the fee is inclusive/exclusive of GST (if applicable).
- ☐ Decide who leads the call and who takes notes.
- ☐ Have the presentation open and tested (screen share works, fonts look right).
- ☐ Have the "Information & access" list (Appendix B) ready to send right after the call.
- ☐ Prepare 3 questions to ask them: top destinations to push, where customers come from, how they handle enquiries today.
- ☐ Remind each other: we promise the work, not the results. If unsure, say "Let me check and confirm in writing."
- ☐ After the call: send a written summary of scope, fee, ad budget, responsibilities and next steps within 24 hours.

## B Information & access to request

| Item                      | Details                                                                                                                              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Website access            | CMS/admin login (e.g. WordPress) or developer contact; hosting access if needed for fixes/admin area                                 |
| Domain / DNS access       | Only if needed for Search Console verification — or the client adds the record with our guidance                                     |
| Google account            | Client's Google account to own Search Console; add us as a user. Google Business Profile access if they want us to check consistency |
| Meta Business Manager     | Partner/admin access for our business account; ad account with client's payment method added                                         |
| Instagram & Facebook Page | Access via Meta Business Suite (preferred over sharing passwords)                                                                    |
| Business details          | Legal name, address, phone, WhatsApp, email, business hours, registrations/affiliations                                              |
| Services & packages       | Full list, priority destinations for Month 1, itineraries, inclusions/exclusions                                                     |
| Pricing & offers          | Starting prices and offers approved for publishing, with validity dates                                                              |

| Item                      | Details                                                                                      |
|---------------------------|----------------------------------------------------------------------------------------------|
| <b>Policies</b>           | Actual cancellation, refund, payment and privacy practices for legal pages                   |
| <b>Brand assets</b>       | Logo (high-res), brand colours/fonts, photos and videos, testimonials with permission        |

| <b>Approver</b>           | One person who approves content and creatives, and expected turnaround                       |

# C Quick glossary

|                                 |                                                                                                 |
|---------------------------------|-------------------------------------------------------------------------------------------------|
| <b>AEO</b>                      | Answer Engine Optimization — writing clear, direct answers to customer questions.               |
| <b>Ad set</b>                   | Middle level in Meta Ads: audience, budget, schedule.                                           |
| <b>Baseline</b>                 | The starting numbers we compare future results against.                                         |
| <b>CPC / CPM / CPL</b>          | Cost per click / per 1,000 impressions / per lead.                                              |
| <b>Crawl</b>                    | Google's robots visiting pages to read them.                                                    |
| <b>CTR</b>                      | Click-through rate: clicks ÷ impressions.                                                       |
| <b>Funnel</b>                   | The path from first seeing the business to becoming an enquiry and then a customer.             |
| <b>GEO</b>                      | Generative Engine Optimization — clear, structured information for AI-based search tools.       |
| <b>Hook</b>                     | The first line or first second of an ad/reel that grabs attention.                              |
| <b>Index / indexing</b>         | Google storing a page so it can appear in results.                                              |
| <b>Instant form</b>             | A Meta lead form that opens inside Facebook/Instagram.                                          |
| <b>Learning phase</b>           | Period when Meta's system is still figuring out who responds to an ad; results are less stable. |
| <b>Meta description</b>         | Short summary shown under a page title in Google.                                               |
| <b>Schema / structured data</b> | Code that labels information for search engines (e.g. "this is an FAQ").                        |
| <b>Search Console</b>           | Free Google tool showing how a site performs in Google Search.                                  |
| <b>Sitemap</b>                  | A file listing the site's pages for search engines.                                             |
| <b>Title tag</b>                | The page title shown as the clickable headline in Google.                                       |
| <b>UTM</b>                      | Tags added to links so we can see which campaign a visitor came from.                           |
| <b>Vanity metric</b>            | A number that looks good but doesn't show business value on its own (e.g. likes).               |

Internal document prepared for the Royal Compass Travels Month 1 engagement. Not for distribution to the client.
